

FREY 2 USB C ADAPTER

Technology within the hifi industry is constantly changing. With the introduction of each upgrade, we get increasingly closer to what we all aim for: authentic sound reproduction. The unfortunate side-effect of immersing yourself in such a rapidly evolving passion, is that our once cutting-edge purchases can quickly be rendered obsolete. Nordost appreciates the investment our customers make in their products. So when upgrades are on the horizon, as is the case with the introduction of Type-C connectors, which are quickly becoming an industry standard in the new generation of computer hardware, Nordost has you covered. The Frey 2 USB C Adapter is the perfect solution for audio enthusiasts who have already invested in high-end USB cables for their computer audio system, and are looking to upgrade to a source that requires USB C compatibility.

The Frey 2 USB C Adapter employs the same construction and benefits as our Frey 2 USB Cable. The adapter uses solid core, silver-plated 99.99999% OFC signal conductors. Implementing a solid core design is essential when working with a cable of this caliber, completely eliminating the negative effects of strand interaction and skin effect. Each conductor is precision wound to correspond accurately with USB's unique, hybrid twisted pair/non twisted pair geometry. The new Frey 2 USB C Adapter utilizes Nordost's proprietary FEP Micro Mono-Filament technology, which lowers the capacitance of the cable, both increasing signal speed and bandwidth. The conductors are then shielded with a dual layer of braid and foil shielding, in order to eliminate EMI and

RFI and even comply with 3.0 standards. Finally, before being terminated, the Frey 2 USB C Adapter is cut to a mechanically tuned length, which reduces internal microphonics and high-frequency impedance resonance.

Nordost's USB C Adapter is terminated with a male USB C connector on one end, and a female Standard A connector on the other, and is both 2.0 and 3.0 compatible. The Frey 2 USB C Adapter will extend the life of your current USB cables while maintaining the hi-fidelity performance of your home sound system.

Designed, manufactured, and hand-terminated entirely in the USA, the Frey 2 USB C Adapter guarantees the accurate construction required to produce the best possible performance from computer audio equipment.

- Fully manufactured and terminated in the USA
- Fluorinated Ethylene Propylene (FEP) insulation
- Micro Mono-Filament technology
- Silver-plated 99.99999% OFC solid core conductors
- Mechanically tuned length: 6.7 inches (17 cm)
- Dual layer of silver braid and foil shielding
- RoHS Compliant
- 2.0 and 3.0 Compatible
- USB C to Standard A (Female)
